## GETTING STARTED

To get the tic-tac-toe app running on your machine, the following steps are needed (We assume you have git installed on your machine):

1. Git clone the repository located here: <https://github.com/GroupOfGreatGuys/tictactoe1>
2. If you do not have maven installed, download maven and follow the instructions located here: <http://maven.apache.org/download.cgi>
3. The app is programmed using Java version 1.7.0\_25 which you can get here: <http://www.oracle.com/technetwork/java/javase/downloads/java-se-jre-7-download-4.html>
4. We are using Heroku to host the webpage. You need to download Heroku on to your computer. You can find everything you need for it here: <https://toolbelt.heroku.com>
5. Run the command `./bin/build`. This will compile the application, run unit tests and create a jar package. Then run the command `./bin/deployheroku` which will ignite the application at <http://goggapp.herokuapp.com>
