GETTING STARTED

To get the tic-tac-toe app building on your machine, the following steps are needed (We assume you have git installed on your machine):

- Git clone the repository located here: https://github.com/GroupOfGreatGuys/ tictactoe1
- 2. If you do not have maven installed, download maven and follow the instructions located here: http://maven.apache.org/download.cgi
- 3. The app is programmed using Java version 1.7.0_25 which you can get here: http://www.oracle.com/technetwork/java/javase/downloads/java-se-jre-7-download-4 html
- 4. We are using Heroku to host the webpage. You need to downlaod Heroku on to your computer. You can find everything you need for it here: https://toolbelt.heroku.com

That's it! All scripts are located in the bin folder and use the maven framework. You can find more information here: http://maven.apache.org/guides/
